Thanks to Instructor Bryan Fluech for sharing the article with us! The article is a great resource for introducing students to the uniqueness of the Florida Panhandle and its ecology. Did you know that the Florida Panhandle is considered one of the most biologically diverse areas in the country? Providing this contribution to the FMNP Instructor’s Corner.

Information, such as that presented in the FMNP, is critical to effective natural resource management in the region. Coastal Training Program’s students are coastal resource policy makers, providing them with access to science-based information that enhances the learning experience of your students. Submissions can be emailed to info@masternaturalist.org. Please want to know about any activities, exercises or tips that you have incorporated into your FMNP classes that have enhanced the learning experience of your students. Help us provide information that may be useful to other instructors in this section each month. We want to hear from you!
